Effective protection for what really matters

Development and manufacturing expertise in all aspects of disinfection and hygiene

Effective protection for what really matters

Viruses and germs are our daily, disease-causing companions. Wherever high demands are placed on the hygiene of hands, surfaces or instruments, DrDeppe makes a valuable contribution to hygiene and infection control in the healthcare sector.

From development over production to filling, we produce high-quality liquids, soaps, creams, gels or soaked wipes. Our disinfectants are certified, highly effective and safe.

For over 40 years, we have stood for this with our development and manufacturing expertise, imaginative innovative power and know-how in all aspects of disinfection.

All products of the DrDeppe brand are oriented towards the needs of professional users in the medical or care sector and are 100% Made in Germany. In addition, we also offer first-class hygiene and disinfectant products outside the healthcare sector, for example for the event industry, hotel business as well as public facilities.

All our products guarantee the highest level of safety.

Welcome to the comprehensive DrDeppe catalogue

Here you will find all the information, products and solutions for **effective disinfection** in various areas.

In times of increased hygiene requirements and a heightened awareness the importance of disinfection, it is more important than ever to have the right means and methods. Whether in **medical facilities, catering, industry** or in the **care sector** - a clean and germ-free environment is essential for everyone's health and well-being.

Our complete catalogue offers you an **extensive range of products** so that you can find the right solutions for your individual requirements. From the development, production and filling of high-quality liquids, soaps, creams, gels or soaked wipes, right through to training and advice - we accompany you on the way to a hygienic environment.

Dive into the product world of DrDeppe and discover **innovative solutions** that help you fight germs effectively.

We hope you enjoy exploring our extensive catalogue and are always available for questions and advice.

Hand disinfection

DrDeppe – Hand disinfection

Hand disinfectants are an essential component of daily hygiene and play an important role in preventing diseases and infections. They are specially formulated to kill or inactivate most microorganisms, including bacteria, viruses and fungi, on the hands.

The effectiveness of hand disinfectants is based on the active ingredients they contain, such as ethanol or isopropyl alcohol. The substances work by specifically attacking the outer shell or the inside of the microorganisms. This inactivates or kills the organisms, which significantly reduces the risk of infection transmission.

It should be noted that not all hand disinfectants are the same effective. The concentration of the alcohol or other effective ingredients contained, the exposure time and the quality of the formulation can influence the effectiveness.

Our hand disinfectants are the result of over 40 years of experience and continuous development of our expertise in the area of hand hygiene.

Product overview

Hand disinfection	25
-------------------------	----

Application aids on request

Product description

OpSept virugon[®] is a ready-to-use, alcoholic, re-fat-tening and perfume-free disinfectant for hygienic and surgical hand disinfection. When used frequently, OpSept virugon[®] is very well tolerated by the skin.

Area of application

Applicable in all areas with increased risk. OpSept virugon[®] has a very broad spectrum of activity, particularly against enveloped and non-enveloped viruses. Effective hand disinfection is achieved in 30 seconds. OpSept virugon[®] is also suitable for individuals in the food sector, certified as HACCP-compliant accor-

ding to EU Regulation (EC) No. 852/2004, and can be safely used within the framework of an HACCP concept.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)
- virucidal

Instruction for use

Before disinfection, clean heavily soiled hands with water and soap. Allow wet hands to dry before disinfection. For hygienic hand disinfection, apply 3 ml to the palm and rub both hands intensively for 30 seconds, ensuring complete coverage. It is important to ensure that spaces between fingers, nail edges, and skin folds are also thoroughly covered. Keep hands moist throughout the entire contact time of 30 seconds and, if necessary, reapply. For surgical hand disinfection, apply enough to wet the entire palm of the hand for 2 minutes, including problem areas such as the interdigits and nail fold. Keep hands moist throughout the entire contact time of 2 minutes and, if necessary, reapply. After the contact time of 30 seconds or 2 minutes has elapsed, the disinfection is complete.

about this product

OpSept Classic

Product description

OpSept Classic is a ready-to-use, alcohol-based disinfectant for hygienic and surgical hand disinfection. It exhibits very good skin tolerance with frequent use.

Area of application

Applicable in all areas of human hygiene.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)

Instruction for use

Before disinfection, clean heavily soiled hands with water and soap. Allow wet hands to dry before disinfection. For hygienic hand disinfection, apply 3 ml to the palm and rub both hands intensively for 30 seconds, ensuring complete coverage. It is important to ensure that spaces between fingers, nail edges, and skin folds are also thoroughly covered. Throughout the entire contact time of 30 seconds, keep the hands moist and, if necessary, reapply. For surgical hand disinfection, rub 3 ml into the hands so that the entire palm, including problem areas such as the interdigits and nail folds, is wet for 90 seconds. Keep the hands moist throughout the entire contact time of 90 seconds and, if necessary, reapply. After the contact time of 30 or 90 seconds, the disinfection is complete.

Information
about this product

Standard rub-in method for hygienic hand disinfection in accordance with EN 1500

Step-by-step instructions

Apply sufficient disinfectant to the palms of your hands. Rub both palms together. Also make sure make sure that your wrists are rubbed with disinfectant.

Rub the palm of your right hand over the back of your left hand. Repeat this the other way round.

Rub your palms together with your fingers interlaced, open fingers against each other.

Place your hands with the outside of your fingers on the opposite palm and interlace them.

Place your right thumb in the closed palm of your left hand. Repeat this step with the left thumb.

Put the fingertips of your right hand together and rub them in the palm of your left hand – and vice versa.

Apply the hand disinfectant to the cupped, dry hands and rub them up to the wrists for 30 seconds following the steps listed. Perform the movements of each step five times. Observe the recommended contact time of the respective product and ensure that the hands remain moist for the entire contact time. If necessary use hand disinfectant again.

Care & Cosmetics

DrDeppe – Care & Cosmetics

Skin care creams and washing lotions are indispensable products for our daily skin-care routine.

Skin care creams are designed to provide the skin with essential moisturising and protect it from drying out. They contain ingredients such as aloe vera, which penetrate deep into the skin and moisturise it from the inside out. Dry skin can cause discomfort and increase the risk of cracking or flaking. Therefore, the regular use of skin care creams is essential to keep the skin supple and healthy.

Washing lotions, on the other hand, are specially developed to thoroughly cleanse the skin and remove impurities, sweat and dirt. They contain mild cleansing substances to gently cleanse the skin, without drying it out or irritating it. Sensitive skin types should use pH-neutral or fragrance-free cleansing lotions to minimise prevent redness and skin irritation. It is important to use the washing lotion sparingly and then rinse the skin thoroughly to remove any residue. After washing, the skin should be moisturised with a skin care cream to restore the skin's moisture balance.

All in all, skin care creams and washing lotions are indispensable companions for healthy skin. They help to moisturise the skin, cleanse and protect it.

In our Professional & Care portfolio you will find a wide range of products such as washing lotions and nourishing creams for hands, body and face to optimally support your skin.

Lotio Med Professional & Care

Product description

The Lotio Med Professional & Care series is an alcohol-free cleansing lotion based on mild cleansing agents. It gently cleanses the skin and provides a pleasant, clean feeling. The cleansing lotion is suitable for daily, mild skin cleansing. Lotio Med Professional & Care is skin-friendly and dermatologically tested.

Ingredients:

AQUA, SODIUM LAURETH SULFATE, COCAMIDOPROPYL BETAINE, COCO-GLUCOSIDE, GLYCERYL OLEATE, HYDROGENATED VEGETABLE GLYCERIDES CITRATE, TOCOPHEROL, CITRIC ACID, SODIUM CHLORIDE, SODIUM BENZOATE, POTASSIUM SORBATE, PARFUM, CI 19140, CI 42090

Instructions for use

Apply 2 ml of the cleansing lotion directly to damp skin and then rinse thoroughly with clear water. The cleansing lotion can be used as a body care product several times a day. Avoid contact with the eyes.

Lotio Med Sensitive Professional & Care

Product description

Lotio Med Sensitive Professional & Care is an alcohol-free cleansing lotion that cleanses the skin gently and delicately, thanks to its mild washing agents. Additionally, during its development, perfumes, colorants, and sulphates were avoided. The cleansing lotion combines skincare and skin cleansing, ensuring a smooth skin feel. Lotio Med Sensitive Professional

& Care is suitable for daily, particularly mild skin cleansing. Lotio Med Sensitive Professional & Care is skin-friendly and dermatologically tested.

Ingredients:

AQUA, LAURYL GLUCOSIDE, COCAMIDOPROPYL BETAINE, SODIUM LAURYL GLUCOSE CARBOXYLATE, SODIUM CO-COYL GLUTAMATE, COCO-GLUCOSIDE, GLYCERYL OLEATE, GLYCOL DISTEARATE, GLYCERIN, HYDROGENATED VEGETABLE GLYCERIDES CITRATE, SODIUM CITRATE, PROPYLENE GLYCOL, SORBIC ACID, TOCOPHEROL, CITRIC ACID, SODIUM BENZOATE, POTASSIUM SORBATE

Instructions for use

Apply 2 ml of the cleansing lotion directly to damp skin and then rinse thoroughly with clear water. The cleansing lotion can be used as a body care product several times a day. Avoid contact with the eyes.

Lotio Protect Professional & Care

Product description

Lotio Protect Professional & Care is an alcohol- and perfume-free skin protection cream, perfectly suitable for skincare. The water-in-oil emulsion provides protection for the skin by forming a breathable skin barrier, shielding it from external influences. Once the cream is adequately distributed on the skin, it quickly absorbs without leaving a greasy film.

Lotio Protect Professional & Care contains vitamin E, panthenol, and calendula extract. It is skin-friendly and dermatologically tested.

Ingredients:

AQUA, CAPRYLIC/CAPRIC TRIGLYCERIDE, CETEARYL ISONONANOATE, GLYCERIN, BUTYLENE GLYCOL, PANTHENOL, POLYGLYCERYL-3 POLYRICINOLEATE, MAGNESIUM SULFATE, POLYGLYCERYL-3 DIISOSTEARATE, CERA ALBA, PAPAVER SOMNIFERUM SEED OIL, PRUNUS AMYGDALUS DULCIS OIL, ZINC OXIDE, TOCOPHERYL ACETATE, CALENDULA OFFICINALIS FLOWER EXTRACT, LACTIC ACID, ETHYLHEXYLGLYCERIN, PHENOXYETHANOL, POTASSIUM SORBATE, SODIUM BENZOATE

Instructions for use

Lotio Protect Professional & Care can be used several times a day and remains on the skin.

Lotio Lind Professional & Care

Product description

Lotio Lind Professional & Care is a light, alcohol- and perfume-free skin care lotion that quickly absorbs into the skin, is non-greasy and leaves a light feeling on the skin. The oil-in-water formulation includes high-quality oils, as well as active ingredients such as vitamin E, panthenol, and calendula extract.

Therefore, Lotio Lind Professional & Care is perfect for daily use, as well as after hand disinfection. Lotio Lind Professional & Care is skin-friendly and dermatologically tested.

Ingredients:

AQUA, CAPRYLIC/CAPRIC TRIGLYCERIDE, GLYCERIN, CETEARYL ISONONANOATE, CETEARYL ALCOHOL, GLYCERYL STEARATE SE, PRUNUS AMYGDALUS DULCIS OIL, PANTHENOL, TOCOPHERYL ACETATE, CARBOMER, SODIUM STEAROYL GLUTAMATE, XANTHAN GUM, BISABOLOL, CALENDULA OFFICINALIS FLOWER EXTRACT, LACTIC ACID, SODIUM HYDROXIDE, ETHYLHEXYLGLYCERIN, PHENOXYETHANOL, POTASSIUM SORBATE, SODIUM BENZOATE

Instructions for Use

Lotio Lind Professional & Care can be used several times a day and remains on the skin.

Lotio Foam Professional & Care

Product description

Lotio Foam Professional & Care is a foam suitable for gentle skin care and gentle cleansing. Mild surfactants ensure a pleasant skin sensation. Thanks to the high-quality ingredients, the skin is moisturized during care and cleansing. Lotio Foam Professional & Care is skin-friendly, alcohol-free, and dermatologically tested.

Ingredients:

AQUA, PENTYLENE GLYCOL, COCAMIDOPROPYL BETAINE, COCO-GLUCOSIDE, PANTHENOL, HAMAMELIS VIRGINIANA LEAF WATER, ALLANTOIN, CITRIC ACID, SODIUM BENZOATE, POTASSIUM SORBATE, PARFUM

Instructions for use

Shake the bottle well before use and spray the foam onto the skin areas to be cleaned. Allow to act briefly, then wipe off with a wipe or wash off with water. When using on the face, avoid contact with the eyes.

Lotio Aktiv Professional

Product description

Lotio Aktiv Professional is a care gel used before and after physical activities. Its formulation is based on a high-quality recipe containing menthol, rosemary, and peppermint oil.

What does Lotio Aktiv Professional achieve?

The gel provides long-lasting cooling and imparts a soothing feeling of freshness and revitalization to the skin.

[Learn more about body care and cosmetics - www.haut.de](http://www.haut.de)

Rosemary is used for its relaxing and revitalizing properties. Its fragrance is invigorating.

Menthol is not only an aromatic substance but also has cooling, refreshing and circulation-promoting properties.

Ingredients:

ALCOHOL DENAT., AQUA, ROSMARINUS OFFICINALIS LEAF OIL, MENTHOL, CAMPHOR, MENTHA ARVENSIS LEAF OIL, ACRYLATES/C10-30 ALKYL ACRYLATE CROSSPOLYMER, TRIETHANOLAMINE, LIMONENE

Instruction for use: Lotio Aktiv Professional Gel should be applied to the hand or directly on the affected skin area and gently massaged in. Lotio Aktiv Professional Gel provides a lasting cooling effect and imparts a soothing feeling of freshness and invigoration. Highly flammable liquid and vapour. Use only on intact skin. Avoid contact with eyes or mucous membranes.

Surface disinfection

DrDeppe – Surface disinfection

Germs are not only spread via hands and instruments, but also via surfaces. Surfaces that are frequently touched by hands or come into contact with mucous membranes or body fluids are exposed to an increased risk of infection. Germs can be spread from these surfaces by hands or dust.

In hygiene sensitive areas, surface disinfection therefore prevents infection and protects patients, residents, visitors, customers and employees. Particularly in the medical sector, care homes, kindergartens, facilities for the disabled, and the food industry, certain surfaces must be disinfected regularly.

DrDeppe offers both medical products and biocides for surface disinfection. This means you will find the optimum product for every application.

Spray In QF

Product description

Spray In QF is a ready-to-use, liquid, alcoholic, aldehyde and QAV-free surface disinfectant.

Area of application

For rapid disinfection of alcohol-resistant surfaces in patient environments, clinics, practices, outpatient departments, and care areas, as well as in industry and public facilities. Excluded are surfaces of instruments, semicritical and critical medical devices.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)

Instructions for use

The ready-to-use product is preferably to be used in the wiping method using a disposable wipe. Spray disinfection should preferably be limited to areas that are not reachable by wiping disinfection. When using the spray method, it should be combined with wiping method. It is important to keep the surface to be disinfected moist throughout the entire contact time to achieve effectiveness.

Information
about this product

Beta Guard Neu

Product description

Beta Guard Neu is a concentrated liquid, alcohol- and aldehyde-free surface disinfectant.

Area of application

For the disinfection of wipe-resistant surfaces in the patient environment, in clinics, practices, outpatient departments, and care areas, as well as in industry and public facilities. Excluded are surfaces of instruments, semi-critical and critical medical devices.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)
- virucidal effective against Polyoma SV-40

Instructions for use

A diluted solution must be prepared before using the product. For this, the required amount of concentrate is mixed with water (drinking water quality). The prepared working solution should preferably be used by wiping with a disposable wipe. Spray disinfection should preferably be limited to areas that cannot be reached by wipe disinfection. When using the spray method, this should be used in a combination of spray/wipe method. The surface to be disinfected must be kept moist for the entire contact time in order to achieve effectiveness. For professional use only.

Information
about this product

Spray On

Product description

Spray On is a liquid, aldehyde- and QAV-free, ready-to-use alcoholic surface disinfectant.

Area of application

It is suitable for disinfecting alcohol-resistant surfaces in the food sector, public facilities, and industry.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)

Instructions for use

The ready-to-use product is preferably to be used in the wiping method using a disposable wipe. Spray disinfection should preferably be limited to areas that are not reachable by wiping disinfection. When using the spraying method, it should be combined with wiping for effective disinfection. It is important to keep the surface to be disinfected moist throughout the entire contact time to achieve effectiveness.

The biocide product Spray On (active ingredients Propan-1-ol and Propan-2-ol) has been approved for product type 2 (disinfectants and algacides not intended for direct application to humans and animals) and product Type 4 (food and feed area) with approval numbers EU-0027669-0000 and CH-0031683-0000. The union authorization is valid until July 31, 2032.

Information
about this product

Spray In GA

Product description

Spray In GA is a ready-to-use, liquid, low-alcoholic disinfectant for surface disinfection. The product shows very good material compatibility under the specified exposure times. Spray In GA is available in the variants Neutral (without fragrance), Melone (fruity fragrance) and Aktiv (fresh fragrance).

Area of application

For rapid disinfection of alcohol resistant surfaces in the vicinity of patients, in clinics, surgeries, outpatient departments and care areas, as well as in industry and public facilities.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)
- effective against Polyoma SV-40

Instructions for use

The ready-to-use product is preferably to be used in the wiping method using a disposable wipe. Spray disinfection should preferably be limited to areas that are not reachable by wiping disinfection. When using the spray method, it should be combined with wiping method. It is important to keep the surface to be disinfected moist throughout the entire contact time to achieve effectiveness.

Information
about this product

Beta Guard Neu

Preparation of a working solution

The product is available as a concentrate for preparing a working solution.

Before use, the working solution is prepared taking into account the required concentration for the intended application.

- 1.** Personal protective equipment: Wear chemical-resistant protective gloves, protective clothing, respiratory protection and tight-fitting safety goggles.
- 2.** Mix Beta Guard Neu with water (drinking water quality) into a working solution (see table below).

Application example: To manufacture 1 L of a 1% working solution, mix 990 ml of water with 10 ml of Beta Guard Neu.

Dosing chart

for the preparation of a working solution

Total amount of working solution	Concentration								
	0.25 %	0.5 %	1.0 %	1.5 %	2.0 %	2.5 %	3.0 %	4.0 %	5.0 %

Disinfection- and cleaning wipes

DrDeppe – Disinfection- and cleaning wipes

The purpose of disinfection- and cleaning wipes is to disinfect or clean surfaces contaminated with pathogens (e.g. door handles, toilets, taps, tables, hands, instruments). They are practical and easy to use as they are pre-soaked and do not require any additional liquid. They are widely used in hospitals, doctors' surgeries, nursing homes, home care, schools and other public areas. Disinfection- and cleaning wipes are important products to reduce the spread of infection and protect people's health and safety.

We produce high-quality, ready-to-use disinfection- and cleaning wipes for skin and hands, surfaces and instruments in our own wipe production facility. Our 100% biodegradable wipes based on CO₂-neutral material made from renewable raw materials are particularly noteworthy.

Beta Guard rfu Bio-wipes

Product description

Beta Guard rfu Bio-wipes are ready-to-use surface disinfectant wipes that are alcohol and aldehyde-free. The CO₂-neutral wipe material is made from renewable raw materials and is 100% biodegradable.

Area of application

For the disinfection of wipe-resistant surfaces of medical devices, device surfaces, and objects in the patient environment, as well as surfaces in industrial and food areas. Excluded are surfaces of instruments, semi-critical and critical medical devices.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)

Instructions for use

The ready-to-use product is used by wiping. It is essential to keep the surface to be disinfected moist throughout the entire exposure times to achieve effectiveness.

Information
about this product

Spray Off wipes

Product description

Spray Off wipes are ready-to-use alcoholic, aldehyde-free surface disinfectant wipes. The used wipe material is polypropylene.

Area of application

For the rapid disinfection of alcohol-resistant surfaces in patient-near environments, especially in clinics, practices, ambulances, and care facilities, as well as in industry and public institutions. Surfaces of instruments, semi-critical and critical medical devices are excluded.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- fungicidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)
- virucidal effective against Polyoma SV-40
- virucidal

Instructions for use

The ready-to-use product is used by wiping. It is essential to keep the surface to be disinfected moist throughout the entire exposure times to ensure effectiveness.

about this product

Spray On wipes

Product description

Spray On wipes are ready-to-use, alcoholic surface disinfectant wipes, free from aldehydes and QACs. The CO₂-neutral wipe material is made from renewable raw materials and is 100% biodegradable.

Area of application

Health care facilities and pharmaceutical and cosmetic industry, for example patient-near environments, working areas/desks, general equipment (excluding food contact surfaces): disinfection of small hard/non-porous surfaces.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)

Instructions for use

The surface to be disinfected is wiped and sufficiently wetted with the product to ensure complete coverage. It is essential to keep the surface to be disinfected moist throughout the entire exposure times to achieve effectiveness.

The biocidal product Spray On wipes (active ingredients: Propan-1-ol and Propan-2-ol) has received Union and Swiss authorizations for product type 2 disinfectants and algacides not intended for direct application to humans or animals) and product-type 4 (food and feed area) with authorization numbers EU-0027668-0000 and CH-0031680-0000. The Union authorization is valid until July 31, 2032.

about this product

Lotio 2in1

Product description

Lotio 2in1 are ready-to-use disinfectant wipes containing Aloe Vera for hand and surface disinfection. The CO₂-neutral wipe material is made from renewable raw materials and is 100% biodegradable.

Area of application

One wipe for two applications: Lotio 2in1 can be used for both, hand disinfection and surface disinfection.

Spectrum of activity

- bactericidal (incl. MRSA), yeasticidal
- active against enveloped viruses (incl. HBV, HIV, HCV, vaccinia-, influenza- and corona-viruses)

Instructions for use

Clean heavily soiled hands and surfaces before disinfection. For hand disinfection, moisten dry hands with the wipe and keep them moist throughout the entire exposure time, if necessary, use another wipe. For surface disinfection, completely wet the surface and if necessary, wipe it again with a second wipe. The surface must be kept moist throughout the entire exposure time. Please mind the exposure times.

about this product

Instru Zym Bio-wipes

Product description

Instru Zym Bio-wipes are ready-to-use, enzyme-based pre-cleaning wipes. The CO₂-neutral wipe material, made from renewable raw materials, is 100% biodegradable.

Area of application

Instru Zym Bio-wipes are used for the pre-cleaning of endoscopes and medical accessories, as well as for surgical and orthopaedic instruments. During this process, coarse organic contaminants are gently removed.

Instructions for use

Quickly wipe the instrument to be cleaned with an Instru Zym Bio-wipe after use. If necessary, repeat with a new wipe until the surface is visually clean. Preferably, pre-cleaning with Instru Zym Bio-wipes should be done from the clean end of the instrument towards the dirty end. For professional use only.

Instrument disinfection- and cleaning

DrDeppe – Instrument disinfection- and cleaning

Used medical devices can be contaminated with pathogens and thus become a source of infection for humans.

The reprocessing (cleaning, disinfection and sterilisation) of medical devices is associated with great responsibility. This must comply with the requirements of the Medical Devices Act (MPDG) and the Medical Devices Operator Ordinance (MPBetreibV).

Cleaning refers to the removal of most visible contamination.

The disinfection process reduces the number of pathogens to such an extent that they can no longer cause infection or spread of the pathogen.

During the sterilisation process, the number of viable microorganisms per unit of sterilisation material is reduced to $\leq 10^{-6}$. Medical devices that come into contact with blood, internal tissues, organs and wounds must be sterile.

There are two methods of instrument disinfection: manually, using the immersion disinfection method, or mechanically, using automatic cleaning machines.

We offer you a high-performance selection of instrument disinfectants and instrument cleaners.

Endo Star Neu

Product description

Endo Star Neu is an aldehyde- and phenol-free instrument disinfectant concentrate for the reprocessing of surgical instruments, as well as thermolabile anaesthesia equipment and rigid endoscopes in immersion or ultrasonic bath. Also suitable for drills or rotating instruments.

Area of application

For all areas where medical instruments are reprocessed using immersion or ultrasonic bath methods. Endo Star Neu is not suitable for the final disinfection of semicritical instruments.

Spectrum of activity

- bactericidal (including MRSA), yeasticidal
- tuberculocidal
- active against enveloped viruses (including HBV, HIV, HCV, vaccinia-, influenza-, and corona viruses)
- instrument disinfection in an ultrasonic bath

Instructions for use

Immersion method

Insert instruments after cleaning. All surfaces and cavities must be covered or filled. Please follow the application concentration and contact times. Remove instruments, rinse thoroughly with water (potable quality), and dry. Follow the hygiene requirements for the reprocessing of medical devices (in Germany: RKI, KRINKO, MPBetreibV). Follow the instructions of the instrument and equipment manufacturers.

Ultrasound application

Similar to the immersion method. Adhere to the contact times specified for ultrasound application.

Product change

Endo Star Neu is not compatible with aldehyde-based disinfectants. For initial use and product change, thoroughly clean and rinse the instruments and accessories, trays, reprocessing equipment, and application aids. The working solution is resistant to protein and can potentially be reused multiple times. If cloudiness or visible contamination occurs, it is recommended to replace the working solution.

For professional use only.

Information
about this product

Instru Plus

Product description

Instru Plus is an instrument disinfectant in concentrated liquid form, containing aldehyde.

Area of application

Suitable for all areas where medical instruments are processed by immersion methods. As a high-level disinfectant, it is part of the final manual reprocessing procedure of all thermostable and thermolabile instruments such as rigid and flexible endoscopes, endoscopic accessories and anesthesia equipment using immersion methods.

Spectrum of activity

- bactericidal (including MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- fungicidal
- active against enveloped viruses (including HBV, HIV, HCV, vaccinia-, influenza-, and corona viruses)
- limited spectrum of virucidal activity (incl. noro-, rota-, adeno-viruses)
- virucidal

Instructions for use

Instru Plus is supplied as a concentrate for the preparation of a working solution. The recommended concentration of the working solution is 3-5%. Insert instruments after cleaning. All surfaces and cavities must be covered or filled. The recommended concentration and contact times must be observed. Remove instruments, rinse thoroughly with water (drinking water quality), and dry. For semicritical medical devices that are not sterilized, germ-free, preferably sterile water should be used for the final rinse. Follow the hygiene requirements for the reprocessing of medical devices (in Germany: RKI, KRINKO, MPBetreibV). Follow the instructions of the instrument and equipment manufacturers. Instru Plus is not compatible with disinfectants containing amines. Thoroughly clean and rinse instruments, accessories, trays, reprocessing equipment and application aids after initial use and whenever products are changed. The product may lose color intensity towards the end of its shelf life. For professional use only.

Information
about this product

Instru Sept AF

Product description

Instru Sept AF is a concentrated aldehyde- and phenol-free disinfectant for manual disinfection. It is protein-fixing and exhibits very good material compatibility.

Area of application

Instru Sept AF is intended for the reprocessing of medical instruments using the immersion method. Instru Sept AF is not suitable for the final disinfection of semicritical instruments.

Spectrum of activity

- bactericidal (including MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- fungicidal
- active against enveloped viruses (including HBV, HIV, HCV, vaccinia-, influenza-, and corona viruses)
- limited spectrum of virucidal activity (including noro-, rota-, adeno-viruses)

Instructions for use

Instru Sept AF exhibits protein-fixing properties and solubilizes even dried protein residues. It is supplied as a concentrate for preparing a working solution. The recommended concentration for the working solution is 3-5%. Insert instruments after cleaning. All surfaces and cavities must be covered or filled. Please follow the application concentration and contact times. Remove instruments, rinse thoroughly with water, and dry. Follow the hygiene requirements for the reprocessing of medical devices (in Germany: RKI, KRINKO, MPBetreibV). Follow the instructions of the instrument and equipment manufacturers. Do not combine amine-containing Instru Sept AF with aldehyde-based products. Clean and rinse all instruments, accessories, trays, processing equipment, and application aids thoroughly when using the product for the first time or when changing products. For professional use only.

Information
about this product

Instru Star rfu

Product description

Instru Star rfu is a ready-to-use, aldehyde-free instrument disinfectant.

Area of application

It is suitable for the disinfection of medical, surgical instruments using the immersion method. It is also suitable for rotary dental instruments (drills). Not suitable for final disinfection of semicritical instruments.

Spectrum of activity

- bactericidal (including MRSA), yeasticidal
- tuberculocidal, mycobactericidal
- active against enveloped viruses (including HBV, HIV, HCV, vaccinia-, influenza-, and corona viruses)
- virucidal effective against Polyoma SV-40

Instructions for use

Immersion method

Immerse instruments immediately after cleaning in the undiluted liquid. All surfaces and cavities must be covered or filled. Please respect the contact times. Remove instruments, rinse thoroughly with water, and dry. Do not insert any aluminium parts. Follow the hygiene requirements for the reprocessing of medical devices (in Germany: RKI, KRINKO, MPBetreibV). Follow the instructions of the instrument and equipment manufacturers. For professional use only.

about this product

Instru Suc

Product description

Instru Suc is a universal, economical, low-foaming, and aldehyde-free concentrate for disinfecting suction units.

Area of application

Instru Suc is used for disinfecting suction units with and without amalgam separators.

Spectrum of activity

- bactericidal (including MRSA), yeasticidal

Instructions for use

Biofilm prevention

Daily disinfection with a 2% working solution can effectively prevent biofilm formation.

Biofilm removal

Existing biofilms can also be removed with Instru Suc: After 16 hours of contact time (overnight) with a 2% working solution, no germs were detected for an existing biofilm. For professional use only.

Instru Zym Bio-wipes

Product description

Instru Zym Bio-wipes are ready-to-use, enzyme-based pre-cleaning wipes. The CO₂-neutral wipe material, made from renewable raw materials, is 100% biodegradable.

Area of application

Instru Zym Bio-wipes are used for the pre-cleaning of endoscopes and medical accessories, as well as for surgical and orthopaedic instruments. During this process, coarse organic contaminants are gently removed.

Instructions for use

Quickly wipe the instrument to be cleaned with an Instru Zym Bio-wipe after use. If necessary, repeat with a new wipe until the surface is visually clean. Preferably, pre-cleaning with Instru Zym Bio-wipes should be done from the clean end of the instrument towards the dirty end. For professional use only.

Information
about this product

Instru Zym

Product description

Instru Zym is a concentrated, low-foaming, enzymatic, and material-friendly instrument cleaner.

Area of application

Instru Zym is used for cleaning surgical and orthopaedic instruments, rigid/flexible endoscopes, and endoscopic accessories.

Application concentration

The cleaning agent is used at a concentration of 0.5 to 5% depending on the degree of soiling and the type of application. Recommended contact time: at least 5 minutes.

Instructions for use

Prepare a diluted solution either manually or on-site using automated dosing systems. Drinking water-quality tap water or fully or partially desalinated water can be used as the dilution medium. The instruments to be cleaned are treated with this ready-to-use solution. Highly active enzymes break down and suspend organic contaminants such as proteins, blood, secretions, detritus, tissue residues, and fats. The application concentration of Instru Zym is variable. Due to the degree of soiling, type and structure of the instruments to be processed, as well as the type and level of contamination, the required application concentration and contact time must be adjusted to the respective reprocessing procedure and validated by the operator. Applicable at water temperatures from 15 - 40°C. Increasing the temperature up to 40°C can accelerate the cleaning performance. For professional use only.

Labomat E

Product description

Labomat E is a concentrated, enzymatic, low-foaming, economical, and material-friendly instrument cleaner.

Area of application

Labomat E is used for chemothermal cleaning of endoscopes and accessories in cleaning and disinfection devices. The enzymes used in Labomat E are temperature resistant up to 70°C.

Application concentration

0.5%

Instructions for use

The dosage is done automatically via the dosing pump of the cleaning and disinfection device. A temperature of 35-40°C is recommended for the inlet water. Temperatures significantly below 35°C may cause foaming. The instructions of the equipment manufacturers regarding installation, operation, and maintenance must be followed, especially regarding the quality requirements of the process water to be used. The validated parameters for the program sequence and dosing settings must be adhered to. Ion exchangers must be regenerated in a timely manner. The reprocessing instructions of the endoscope manufacturers must be observed. For professional use only.

Information
about this product

Labomat KS

Product description

Labomat KS is a ready-to-use, phosphate- and surfactant-free rinsing agent for disinfection dishwashers.

Area of application

Labomat KS is used to neutralise alkaline substances on medical instruments and laboratory equipment after fully automated cleaning.

Application concentration

Setting of the dosing pump: 0.1-0.5%

Instructions for use

Dosing takes place automatically via the dosing pump in the dishwasher. Please follow the instructions of the relevant device manufacturer. Do not mix with other products. When changing products, rinse the dosing system including the suction tubing with water. Labomat KS should not be used on objects made of anodised aluminium, chrome-plated or nickel-plated parts. For professional use only.

about this product

Labomat SPM

Product description

Labomat SPM is a concentrated enzymatic, low-foaming and economical instrument cleaner with high material compatibility.

Area of application

Labomat SPM is used for the mechanical reprocessing of surgical instruments and anaesthesia accessories. The enzymes used in Labomat SPM are temperature-stable up to 70°C.

Application concentration

0.2-1%

Instructions for use

The dosage is carried out using the dosing pumps in the instrument dishwasher. A temperature of 35-40°C is recommended for the inlet water. Temperatures significantly below 35°C may cause foaming. The instructions of the device manufacturers regarding installation, operation, and maintenance must be observed, especially regarding the quality requirements of the process water being used. The validated parameters for the program sequence and dosing settings must be adhered to. Ion exchangers must be regenerated in a timely manner. For professional use only.

Preparation of working disinfectant solutions

Instruction for use

Endo Star Neu

Instru Extra

Instru Plus

Instru Sept AF

Instru Suc

Instru Zym

The product is available as a concentrate for preparing a working solution.

Before use, the working solution is prepared taking into account the required concentration for the intended application.

- 1.** Personal protective equipment: Wear chemical-resistant protective gloves, protective clothing, respiratory protection and tight-fitting safety goggles.
- 2.** Mix the concentrate to be used with water (drinking water quality) into a working solution (see table below).

Application example:

To manufacture 1 L of a 1% working solution, mix 990 ml of water with 10 ml of the concentrate.

Dosing chart

for the preparation of a working solution

Laboratorium Dr. Deppe GmbH General Terms and Conditions of Sale and Delivery

I. General

The following General Terms and Conditions of Sale and Delivery become the contents of contracts which we (the seller) conclude with entrepreneurs within the meaning of Section 14 of the German Civil Code [Bürgerliches Gesetzbuch, **BGB**] (customers). These General Terms and Conditions also apply to all future business relations with the customer even if they have not been expressly agreed a second time. We expressly rebut any General Terms and Conditions of our customers.

II. II. Effective date of a contract, adjustment of the scope of delivery, and cancellation

1. A contract becomes effective once the customer has received our confirmation of order in text form. The seller's product descriptions are to be understood as a request to the customer to submit its own offer, which the seller accepts with the confirmation of order.
2. In the case of doubt, the contents of the contract are based on the confirmation of order.
3. Confirmed prices are in principle binding, unless the seller reserves the right in the confirmation of order to adjust the prices.
4. The seller reserves the right to exceed or fall short of the quantity of the lot to be delivered to you by 10%. The customer will pay for the quantity that is actually delivered. The seller might exercise this right if he himself is supplied with excess quantities or short shipments by the sub-supplier despite a purchase order adjusted for your order.
5. The seller offers cancellation of a contract in exceptional cases and only against a cancellation fee, which the seller bases on the costs incurred by him up to the processing of the customer's cancellation request. The customer has no legal claim to an offer of cancellation. The seller will only notify the customer of the cancellation offer in writing. The cancellation shall only become effective upon receipt of the cancellation fee within the payment period specified to the customer in the notification, provided that, in said notification, the seller does not offer the option of written acceptance of the offer and a payment period beyond this.

III. Delivery

1. Delivery dates or delivery periods are binding only if the seller confirms them in writing. Any delivery times stated are approximate.
2. Subject to any other individual agreement, the seller shall deliver the properly packed goods (obligation to perform at the place of despatch). The seller always delivers EXW, Incoterms 2010, unless he confirms a different procedure.
3. The timing of despatch ex works is decisive for compliance with delivery periods and dates. If the goods cannot be despatched in a timely manner through no fault on our part, the seller is deemed to have satisfied his obligations by notifying the customer that the goods are ready for despatch.
4. Delivery periods commence from the date of our confirmation of order. Delivery periods and delivery dates are postponed or extended until the customer has performed its own required contribution for the execution of the order (e.g. obtaining all official certificates, providing guarantees and letters of credit, making advance payments, printing and product approval certificates, delivery of primary or intermediate products/packing).
5. In the case of delay, the customer may withdraw from the contract upon expiry of a reasonable period of at least two weeks – set by the seller – if the goods have not been despatched by expiry of the period. Further claims, especially claims for damages, are precluded.
6. 6. Delivery obligations may be deferred or suspended completely in the following cases; the seller shall definitely inform the customer immediately of any delay and, if the delivery obligation is suspended or ceases, payments received shall be refunded immediately.
 - a. The seller's delivery obligation is subject to correct and timely delivery on the part of his suppliers, unless he is at fault for the wrong or delayed delivery. Part-deliveries are permissible insofar as the customer can reasonably be expected to accept them.
 - b. In events of force majeure, the seller may postpone delivery by the duration of the hindrance and a reasonable start-up time. This also applies if such events occur during an existing delay.

Force majeure is deemed to include monetary, trade and other governmental measures (in particular pandemic-related measures), strikes, lock-outs, operational disturbances for which the seller is not responsible (e.g. fire, shortage of raw materials or energy), transportation obstructions, delays at customs, and all other circumstances for which the seller is not responsible that make delivery considerably more difficult or impossible. It is irrelevant whether these circumstances occur on the seller's premises or those of a sub-supplier. If the aforementioned events, especially a delay of more than three months in performing the contract in substantial parts, mean either party to the agreement cannot reasonably be expected to perform the contract, this party may completely or partly withdraw from the contract. This may not form the basis of any claims for damages. The seller may rely on the above-mentioned circumstances only if it notifies the customer immediately thereof.

IV. Packaging

The seller packs the goods for despatch on pallets. The packing is not intended or suitable for delivery to the end customer or for storage of the goods.

V. Prices and payment

1. All prices exclude the applicable statutory rate of VAT.
2. In the case of master agreements or supply quotas, the seller reserves the right to set minimum order quantities. Failure to order the minimum quantity agreed in a single order on call and/or in a single order leads to a minimum order surcharge of 10% being added to the agreed product price.
3. Regardless of minimum order quantities, the seller charges a handling fee of €50.00 per shipment on orders worth less than €750.00 net (sales price of the goods excluding insurance, packing, transport and VAT).
4. If goods not destined for the territory of the Federal Republic of Germany are collected by the customer or its representative, the customer shall provide the seller with the export certificate (entry certificate) required for tax purposes. Otherwise the customer shall pay an amount corresponding to the respective applicable rate of VAT for domestic supplies in addition to the invoice amount to the seller.
5. Unless individually agreed otherwise, the seller

supplies only upon full payment of the relevant invoice and all other invoices owed by the customer (customer's advance payment obligation).

6. In the case of goods supplied abroad (including to EU states), the seller might – regardless of the advance payment obligation – make the supply contingent upon the customer's provision of security for payment (bank guarantee).
7. The customer may set off only those claims which are uncontested and have been finally settled.
8. Claims are due upon receipt of the invoice, no later than 14 days after delivery of the goods, unless otherwise agreed in an individual contract. It is sufficient if the customer has received the invoice by fax or by email.

VI. Warranty and notice of defects

1. On the goods the seller sells, he provides a warranty of one year after arrival of the goods at the customer's premises or, in the case of sales shipment, at the place of destination. The regulations on the sale of consumer goods remain unaffected by this.
2. Notice of defects shall be given immediately in writing, but no later than three days after arrival of the goods at the place of destination. In the case of drop shipments, the period commences upon arrival of the goods at the place of destination. The customer shall, in the case of drop shipments, ensure that it is able to satisfy its obligation to inspect and report defects upon arrival of the goods at the place of destination. Defects which cannot be identified within this period, even with meticulous examination, shall be reported immediately upon discovery, and all further work or processing shall cease at once. The warranty period remains unaffected.
3. If the customer accepts the goods in the manner agreed, notice of defects ascertainable using the agreed manner is precluded.
4. In the event of a claim for defects under warranty, the seller will replace or rework at his own discretion. After two unsuccessful attempts at subsequent performance, the customer may withdraw from the contract or reduce the purchase price.
5. If the customer does not immediately give the seller, for reasons attributable to it, the opportunity to convince himself of the defect (e.g. by returning samples/parts of the goods) despite being requested to do so, the warranty claims lapse in respect of the defect.
6. Responsibility for the application, use and processing of the goods purchased lies exclusively with

the customer. The seller's technical advice, whether given verbally or in writing, is provided only as non-binding information – also in relation to any property rights of third parties – and does not relieve the customer of its own obligation to examine the products for their suitability for the processes and purposes intended. Nevertheless, any liability on the part of the seller is limited to the value of the goods supplied by the seller.

VII. Exclusion of liability

1. Unless otherwise stated in this agreement, including the following provisions, the seller is liable for breach of contractual and non-contractual obligations under the relevant statutory provisions.
2. The seller is liable for damages – for whatever legal reason – in the cases of intent and gross negligence. With other types of negligence, he is liable only for losses resulting from
 - a. injuries to life, limb or health,
 - b. breach of a material contractual obligation (obligation whose fulfilment is of eminent importance for the proper performance of the contract and on whose compliance the contracting party regularly relies and may rely); in this case, liability is, however, limited to the remedy of the foreseeable, typical loss.
3. The limitations of liability from subsection 2 do not apply if the seller fraudulently conceals a defect or give a quality guarantee for the goods. The same applies to a customer's claims under the German Product Liability Act (Produkthaftungsgesetz).
4. The customer may withdraw from, or terminate, the contract due to a breach of obligation which is not a defect only if the seller is responsible for the breach of obligation. A customer's free right of termination (especially under sections 651, 649 BGB) is precluded. Otherwise the statutory prerequisites and legal consequences apply.
5. In particular with reference to Article 74 of the United Nations Convention on Contracts for the International Sale of Goods, **CISG**, any liability for damages on the part of the seller's company requires that it be possible to accuse the management or employees of at least slight negligence to the extent no more serious fault is the case under these General Terms and Conditions, a contract or the law.

VIII. Retention of title

The seller supplies exclusively subject to the following extended and expanded right to retain title:

1. Until full settlement of all the seller's current and

future claims arising from a contract of sale and an ongoing business relationship (secured claims), the seller reserves the right vis-à-vis the buyer to retain title to the items sold.

2. The goods subject to retention of title (reserved goods) may be neither pledged nor assigned as security to third parties until full settlement of the secured claims. The customer shall immediately notify the seller in writing if and to the extent third parties seize goods belonging to the seller.
3. If the customer breaches the contract, for example, by failing to pay the purchase price due, the seller may, under the statutory provisions, withdraw from the contract and/or, based on its right to retain title to the goods, demand they be handed over. This demand does not simultaneously constitute a declaration of withdrawal; instead, the seller may simply demand the handover of the goods and reserve the right to withdraw from the contract. If the customer fails to pay the purchase price, the seller may assert these rights only if the customer had previously been set a reasonable deadline for payment or such deadline is dispensable under the statutory provisions.
4. The customer may resell and/or process, combine or mix the reserved goods (entitlements). In this case, the following applies:
 - a. The retention of title to the goods extends to the products – at their full value – arising from the processing, mixing or combining of our goods, with the seller being deemed as the manufacturer. If, in the processing, mixing or combining with third-party goods, third-party ownership rights remain in existence, the seller acquires joint title in proportion to the accounting value of the processed, mixed or combined goods. Otherwise the same applies to the products arising as for the reserved goods supplied.
 - b. As security, the customer now, already, assigns to the seller in full or in the amount of any portion of joint title to the claims against the buyer's customer arising from the sale of the items, as per the foregoing subsection. The seller accepts this assignment of title. The customer's obligations stipulated in subsection 2 also apply in respect of the assigned claims.
 - c. The customer may resell, process, mix and combine, and collect the claim as long as it itself is neither overindebted under insolvency law nor insolvent, or threatening to become so. These entitlements and the right of collection definitely end if the customer fails to satisfy its payment

obligations to the seller when due, the seller has therefore set the customer a deadline and the customer has not paid the claims owed within the period stipulated.

- d. The customer shall disclose to the seller at its request the assigned claims and the debtor thereof (third-party debtor) before delivery to the third-party debtor. At the seller's request, it shall provide all information necessary for collection, hand over the relevant documents and notify the debtors of the assigned claims.
- e. If the realizable value of the securities exceeds the seller's claims by more than 10%, the seller will, at the customer's request, release the securities at its own discretion.

IX. Place of jurisdiction, applicable law, arbitration clause

1. The place of jurisdiction is that of the registered office of the seller.
2. Exclusively German law shall apply. The only sales contracts which are based on this agreement follow the English version of United Nations Convention on Contracts for the International Sale of Goods, CISG dated 11 April 1980.

X. Final provisions

1. Should individual provisions of these Terms and Conditions be invalid or unenforceable, or become invalid or unenforceable after a contract has come into effect, the validity of the contract and the General Terms and Conditions of Sale remain unaffected. The invalid or unenforceable provision shall be replaced by a valid and enforceable provision whose effects come closest to the economic objective pursued by the contractual parties with the invalid and unenforceable provision. The foregoing provisions apply by analogy in the event of omissions.
2. Amendments and additions to the relevant contract shall be in writing.
